Project Design Phase-I Proposed Solution Template

| Date | 29 September 2022 |
|---------------|--|
| Team ID | PNT2022TMID39559 |
| Project Name | Digital Naturalist - AI Enabled tool for |
| | Biodiversity Researchers |
| Maximum Marks | 2 Marks |

Proposed Solution Template:

Project team shall fill the following information in proposed solution template.

| S.No. | Parameter | Description |
|-------|---------------------------------------|--|
| 1. | Problem Statement (Problem to be | To build an efficient AI based image |
| | solved) | recognition tool which effectively to curb out |
| | | the following constraints: |
| | | • To capture the flora and fauna using the AI |
| | | tool |
| | | • To provide the information about the flora |
| | | and fauna resp |
| 2. | Idea / Solution description | This system is built by using the Image/object |
| | | recognition and classification using (CNN) |
| | | Convolutional neural network. By using this |
| | | system, we can capture the image of any animals |
| | | and plants and can obtain the information about |
| | | the flora and fauna at any time |
| 3. | Novelty / Uniqueness | This AI powered chatbot gives a 24*7 efficient |
| | | automated so that the service can be used |
| | | anywhere and anytime. This system carries out |
| | | the visualisations of the interpreted results. It also |
| | | provides various information regarding the |
| | | respective flora and fauna. |
| 4. | Social Impact / Customer Satisfaction | The feasibility of implementing this idea is |
| | | moderate neither easy nor tough because the |
| | | system needs to satisfy the basic requirements |
| | | of the customer as well as it should act as a |
| | | bridge towards achieving high accuracy on |
| | | predicting and analysing the image taken as |

| | | input and to deliver the output with respective to |
|----|--------------------------------|---|
| | | the input image. |
| 5. | Business Model (Revenue Model) | By using this system, the users can predict and |
| | | analyse the picture of the animals or plants. In |
| | | which it results to the visualizing the description |
| | | of the flora or fauna which taken as input. |
| 6. | Scalability of the Solution | By implementing this system, the people can |
| | | efficiently and effectively to gain knowledge |
| | | about the nature they want and they wish to use |
| | | at anytime. This system can also be integrated |
| | | with the future technologies |
